

# RAUTITAN

## Future proof alternative to traditional copper

In the plumbing industry, copper has long been the default material for medium and large-bore installations, particularly in commercial projects. Since introducing the RAUTITAN pipe and fitting system to Australia in 1991, REHAU has provided a proven alternative that combines performance, reliability and installation efficiency.

The RAUTITAN range is available from 16 mm to 63 mm, making it suitable for everything from residential applications through to larger commercial systems requiring hot water flow and return lines.

RAUTITAN has been widely specified in major commercial developments including apartment buildings, hospitals and schools. These environments demand complex water, gas, sewer and drainage systems, where long-term reliability, quality and innovative installation methods are critical. RAUTITAN has consistently met these requirements while helping to reduce installation time, system noise and overall project costs.

The system is regularly selected due to its competitive installed cost, long service life and installer-friendly design. RAUTITAN is approved for continuous hot water flow and return applications up to 70 °C, using both high-quality brass and polymer fittings.

# Why choose RAUTITAN over traditional copper?

## Lighter & Faster

- Up to four times lighter than copper
- Easier handling and improved installation speed
- Supplied in 100 m coils and 5 m straight lengths for greater efficiency

## Flexible & Durable

- Flexible pipe reduces the number of joints
- Fewer fittings mean fewer potential leak points
- Freeze-break resistant - expands rather than splits when frozen

## Quieter & Smoother

- Smooth internal bore resists scaling and deposit build-up
- Up to 75% reduction in water hammer
- Generates up to four times less noise than metal systems

## Cost Certainty & Sustainability

- Reduced environmental impact compared to traditional metal systems
- No exposure to volatile metal pricing
- Non targeted scrap value
- Competitive installation cost across the lifecycle of the project

## The range includes purpose-specific pipe options including:

- RAUTITAN Platinum (Hot and cold water)
- RAUTITAN Red (Hot water)
- RAUTITAN Green (Rainwater)
- RAUTITAN Lilac (Recycled water)

RAUTITAN is stocked nationally across more than 500 Reece branches throughout Australia and New Zealand, ensuring reliable availability and local support.
